Art Unit: 1711

1. Claims 9 and 10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The reference to the compounds of claims 9 and 10 as groups renders the claims indefinite. Within the chemical arts, a chemical group refers to a substituent that is present on or within a compound. For example, an amine group is a chemical group that is a substituent of an amine compound. Therefore, it is unclear how applicants' chemical groups (compounds) relate to the backbone of claim 1. Despite applicants' response, it remains unclear how the hydrophobic backbone can comprise the specified compounds. If the compounds react to form the backbone, then the backbone would comprise the residues of the compounds.

2. Claims 1-3, 5-10, and 19-23 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Support has not been provided for the direct incorporation of the subject matter of claim 4 into claim 1. Applicants' have only provided support for claiming that poly(dithiocarbamate) resins contain no tertiary nitrogen groups. See page 2, lines 11-13 of the specification.

3. Claims 1-3, 5-10, and 19-23 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Applicants have

Art Unit: 1711

claimed that the resin contains no tertiary nitrogen groups; however applicants have specified within claim 10 that secondary amine containing compounds may form the backbone.

Therefore, it would seem that the reaction of the carbon disulfide with the secondary amine groups of these backbone compounds would yield tertiary nitrogen groups, and applicants have provided no guidance to prevent such a result.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a).

Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication should be directed to R. Sergent at telephone number (571) 272-1079.
